Courier

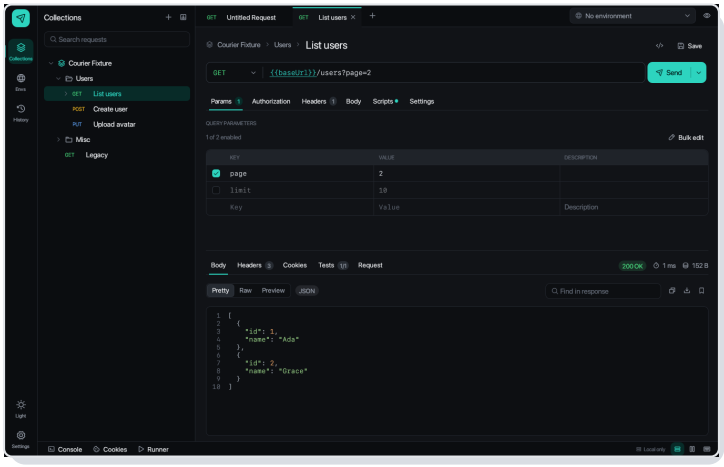

v0.1.0 · macOS · Windows · Linux

QUICK START · TRY IT IN TWO MINUTES

A fast, local-first API client. No account, no cloud — your requests stay on your machine.

What you can do

- **Send any HTTP request** — with params, headers, JSON, forms, files or GraphQL.
- **Every common auth** — Bearer, Basic, API key, OAuth 1 & 2, JWT, AWS, Digest.
- **Variables & environments** — switch between dev, staging and prod in one click.
- **Collections & history** — organise requests; everything you send is remembered.
- **Scripts & tests** — JavaScript pre-request and test scripts with pm.*
- **Run whole collections** — with data files, then export JUnit reports.
- **Postman & cURL** — import and export Collection v2.1 and cURL commands.

1 Install — one command

Each command downloads the latest release, installs it and opens Courier.

Ubuntu / Debian

paste into Terminal · asks for your password once

```
wget -O /tmp/courier.deb https://github.com/ambujraj2001/Courier/releases/latest/download/courier_amd64.deb &&
sudo apt install -y /tmp/courier.deb && courier
```

Windows 10 / 11

paste into PowerShell · puts Courier.exe on your Desktop

```
$f = "$env:USERPROFILE\Desktop\Courier.exe"
iwr https://github.com/ambujraj2001/Courier/releases/latest/download/Courier-windows-x86_64.exe -OutFile $f
Start-Process $f
```

macOS (Apple Silicon)

paste into Terminal · Intel Mac: change arm64 to x86_64 (twice)

```
cd /tmp && curl -fLO https://github.com/ambujraj2001/Courier/releases/latest/download/Courier-macos-arm64.dmg &&
hdiutil attach -nobrowse -quiet -mountpoint /tmp/courier-dmg Courier-macos-arm64.dmg &&
cp -R /tmp/courier-dmg/Courier.app /Applications && hdiutil detach -quiet /tmp/courier-dmg &&
open /Applications/Courier.app
```

2 Try it

1 Open a new request

Press **Cmd+T** on Mac or **Ctrl+T** on Windows/Linux.

2 Paste this into the URL bar

```
curl https://jsonplaceholder.typicode.com/posts \
  -H 'Content-Type: application/json' \
  -d '{"title":"Hello from Courier","userId":1}'
```

3 Send it

Press **Cmd+Enter** / **Ctrl+Enter**. You should see **201 Created** and a JSON reply.

Bonus: press **Cmd+O** / **Ctrl+O** to import a Postman collection, environment or any cURL command.

3 Handy shortcuts

ACTION	MAC	WIN / LINUX
New request	Cmd+T	Ctrl+T
Send request	Cmd+Enter	Ctrl+Enter
Save	Cmd+S	Ctrl+S
Import	Cmd+O	Ctrl+O
Focus the URL bar	Cmd+L	Ctrl+L
Search the sidebar	Cmd+F	Ctrl+F
Toggle console	Opt+Cmd+C	Ctrl+Alt+C
All shortcuts	Cmd+/	Ctrl+/
